This sequence represents the maize PR-1 like protein, PR-1mz. The cDN encoding this sequence was isolated by screening a BTH-induced cDNA library was screened using a probe matching to the PR-1 barley clone HVPR1BR. The cDNA encoding this sequence,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       AAQ99800-Q99803 and AAQ99805 are all used in recombinant/chimaeric DNA molecules of the invention. The DNA sequences were isolated by differential screening of a cDNA library, followed by analysis by Northern hybridisation to RNA in the presence and absence of cyclohexamide. The genes are used in the creation of transgenic plants. All of these sequences confer anti-pathogenic properties to transgenic plants. Transgenic expression of 2 or more of the recombinant molecules of the invention that encode anti-pathogenic proteins provides a synergistic increase in plant protection, and may also offer protection against a wider range of pathogens.

The promoters are useful for expressing heterologous genes (including genes for disease resistance) in plants, especially dicots, or monocots i.e. maize. The promoters are useful for the genetic manipulation of plants to exhibit specific phenotypes, particularly enhanced resistance to pathogen-caused disease. Pathogens include viruses such as tobacco or cucumber mosaic virus, ringspot virus, necrosis virus, and maize dwarf virus, and viroids, bacteria, insects, nematodes and fungi. The present sequence represents a maize PR-1 protein given in the present invention.
The present sequence represents a polypeptide which has antibacterial activity. The antibacterial protein and its polynucleotide can be used for the creation of a plant with resistance against pathogenic microbes " &"
                                                                                                                                                                                                                                                                                                                                                                                                                                 Antibacterial protein;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence

                                                                                                                                                                                                                                                                                                                                      It is deduced from cDNA from tobacco mosaic virus (TMV) infected tobacco plants contained in plasmid pNtSNRCPRIc/83. Expression of a recombinant DNA molecule that encodes P-R proteins and regulatory sequences in a plant enhances the hypersensitive response of the plant to an invading pathogen. The calculated molecular weight of the mature PR-protein is 15,129 and is in reasonable agreement with the Mr of 18kD estimated by SDS polyacrylamide gene electrophoresis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Pathogenesis-related proteins used for expression in plants to invading pathogen
